# Focus Area- Topic E 

Multiplication of a Fraction by a Fraction
Solve. Draw a model to explain your thinking. Joseph has $\frac{1}{4}$ of a pound of strawberries. He gave his teacher $\frac{1}{5}$ of the strawberries. What fraction of strawberries did Joseph give to his teacher?

Step 2: We need to find $\frac{1}{5}$ of $\frac{1}{4}$. Split the whole rectangle into 5 equal parts by drawing horizontal lines. Now, shade 1 of the 5 parts (that are already shaded) and label it $\frac{1}{5}$.

What's the name of these units? Twentieths

$$
\frac{1}{5} \text { of } \frac{1}{4}=\frac{1}{20} \rightarrow \frac{1}{5} \times \frac{1}{4}=\frac{1}{20}
$$

Joseph gave his teacher $\frac{1}{20}$ of the strawberries.

Solve. Draw a model to explain your thinking.
Of the students on Nia's track team, $\frac{3}{5}$ participate in running events. Of the students who participate in running events, $\frac{2}{3}$ are in the relay race. What fraction of the students on the track team ran in the relay race?

Step 1: Draw a rectangle and cut it vertically into 5 equal parts.
 Shade 3 parts and label it $\frac{3}{5}$.

Step 2: Split the rectangle into 3 equal parts by drawing horizontal lines. Now shade 2 of the 3 parts (that are already shaded) and label it $\frac{2}{3}$.

How many units make our whole? $\underline{15} \longrightarrow$ What's the name of these units? Fifteenths

$$
\frac{2}{3} \text { of } \frac{3}{5}=\frac{6}{15} \rightarrow \frac{2}{3} \times \frac{3}{5}=\frac{6}{15}
$$

$\frac{6}{15}$ or $\frac{2}{5}$ of the students ran on the relay race.

Method 1: Students will eventually see a pattern and multiply numerator times numerator and denominator times denominator.

$$
\frac{2}{5} \times \frac{10}{12}=\frac{2 \times 10}{5 \times 12}=\frac{20}{60}=\frac{1}{3}
$$

Method 2: Students divide by common factors prior to multiplying.

A common factor of 2 and 12 is 2 .
A common factor of 10 and 5 is 5 .

Solve Word Problems Using a Tape Diagram:
Dell has 14 blue marbles. His blue marbles make up $\frac{2}{5}$ of his total number of marbles. How many marbles does Dell have?

$$
\begin{aligned}
& 2 \text { units }=14 \\
& \begin{aligned}
1 \text { unit } & =14 \div 2 \\
& =7
\end{aligned} \\
& 5 \text { units }=5 \times 7=35
\end{aligned}
$$

Dell has 35 marbles.

## Relate decimal and fraction multiplication

Example A:

Example B:

9 inches $=$ $\qquad$

Problem: A container can hold $4 \frac{1}{2}$ pints of water. How many cups can 2 containers hold? ( 1 pint $=2$ cups)

$$
\begin{aligned}
4 \frac{1}{2} p^{t} & =4 \frac{1}{2} \times 1 p t \quad 9 c \times 2=18 c \\
& =4 \frac{1}{2} \times 2 c \quad \text { Two containces can hold } 18 \text { cups. }
\end{aligned}
$$

$=\frac{9}{2} \times 2 c$
$=\frac{18}{2} c$
$=9$
