## $5^{\text {th }}$ Grade Math

Module 5: Addition and Multiplication with Volume and Area

## Math Parent Letter

This document is created to give parents and students an understanding of the math concepts found in Eureka Math (© 2013 Common Core, Inc.) that is also posted as the Engage New York material which is taught in the classroom. Grade 5 Module 5 of Eureka Math (Engage New York) covers Addition and Multiplication with Volume and Area. This newsletter will discuss Module 5, Topic B. In this topic students come to see that multiplying side lengths or multiplying the area by the number of layers yields an equivalent volume.

Topic B: Volume and the Operations of Multiplication and Addition

Words to know:

- area
- solid figure
- base
- length/width/height
- capacity
- volume
- cubic centimeters
- face
- milliliters

## Things to Remember!

Area - the number of square units that covers a twodimensional figure
Volume - measurement of space or capacity
Space - the amount of cubes that will fit inside a solid; packing Capacity - the amount of liquid that fills a container; filling
Face - any flat surface of a three-dimensional figure
Cubic Centimeter - all sides measure 1 centimeter; abbreviation cm
Milliliter - unit of capacity equal to one-thousandth of a liter; abbreviation is mL
$\mathrm{cm}^{\mathbf{3}}$ is read centimeters cubed. $\mathrm{cm}^{2}$ read centimeters squared.

## OBJECTIVES OF TOPIC B

- Use multiplication to calculate volume.
- Use multiplication to connect volume as packing with volume as filling.
- Find the total volume of solid figures composed of two non-overlapping rectangular prisms.
- Solve word problems involving the volume of rectangular prisms with whole number edge lengths.
- Apply concepts and formulas of volume to design a sculpture using rectangular prisms within given parameters.

## Focus Area- Topic B

Module 5: Addition and Multiplication with Volume and Area
Find the volume by multiplying side measures

$\begin{aligned} \text { Volume } & =(3 \mathrm{~cm} \times 2 \mathrm{~cm}) \times 4 \mathrm{~cm} \text { Volume } \\ & =(2 \mathrm{~cm} \times 4 \mathrm{~cm}) \times 3 \mathrm{~cm} \\ & =6 \mathrm{~cm}^{2} \times 4 \mathrm{~cm} \\ & =24 \mathrm{~cm}^{3}\end{aligned} \quad \begin{aligned} & =24 \mathrm{~cm}^{3}\end{aligned}$
Volume $=(4 \mathrm{~cm} \times 3 \mathrm{~cm}) \times 2 \mathrm{~cm}$

$$
=12 \mathrm{~cm}^{2} \times 2 \mathrm{~cm}
$$

$$
=24 \mathrm{~cm}^{3}
$$

## All three yield the same volume. This shows that the order does not matter when multiplying the measure of each side.

Calculate the volume by multiplying the area of one face by the number of layers

$3 \mathrm{~cm} \times 2 \mathrm{~cm}=6 \mathrm{~cm}^{2}$
There are 4 layers of $6 \mathrm{~cm}^{2}$.
(resembles layers of cake)
Volume $=6 \mathrm{~cm}^{2} \times 4 \mathrm{~cm}$
$=24 \mathrm{~cm}^{3}$

All three yield the same volume.

Application Problems:
Eddie says more information is needed to find the volume of the rectangular prism. Explain why Eddie is mistaken and calculate the volume.

Eddie can multiply the area of the face by the width of 5 in .
Volume $=60$ in $^{2} \times 5$ in

$$
=300 \mathrm{in}^{3}
$$

What is the volume of a jewelry box with a length of 10 centimeters, a width of 4 centimeters, and a height of 3 centimeters?

$$
\begin{aligned}
\text { Volume } & =(10 \mathrm{~cm} \times 4 \mathrm{~cm}) \times 3 \mathrm{~cm} \\
& =40 \mathrm{~cm}^{2} \times 3 \mathrm{~cm} \\
& =120 \mathrm{~cm}^{3}
\end{aligned}
$$

The volume of the jewelry box is $120 \mathrm{~cm}^{3}$.

Remember the order does not matter when multiplying the measure of each side.
$* * * * * * * * * * * * * * * * * * * * * * * * * * * * * *$
A rectangular prism has a volume of 30 cubic feet. Its height is 5 feet. Which are possible dimensions for the base of the prism?
A. 1 foot x 6 feet
B. 3 feet x 10 feet
C. 3 feet x 3 feet
D. 12 feet x 12 feet

Correct Answer: A (1 ft x 6 ft$) \times 5 \mathrm{ft}=30$ cubic feet or $30 \mathrm{ft}^{3}$

## Liquid Volume

From an activity in Lesson 5, students will conclude that $1 \mathrm{~cm}^{3}$ is equivalent to 1 mL . Milliliters are units of capacity which tell the amount of liquid a container will hold. There are $1,000 \mathrm{~mL}$ in a liter.

Problem: Find the volume of the prism and then shade the beaker to show how much liquid would fill the box.

$$
\begin{aligned}
\text { Volume } & =(8 \mathrm{~cm} \times 5 \mathrm{~cm}) \times 10 \mathrm{~cm} \\
& =40 \mathrm{~cm}^{2} \times 10 \mathrm{~cm} \\
& =400 \mathrm{~cm}^{3}
\end{aligned}
$$

Since $1 \mathrm{~cm}^{3}$ equals $1 \mathrm{~mL}, 400 \mathrm{~cm}^{3}$ equals 400 mL .

Total volume of a solid figure compose of two or more non-overlapping prisms

## Prism A

Length - 3 inches
Width - 5 inches
Height - 2 inches
Volume $=3$ in $\times(5$ in $\times 2$ in)

$$
\begin{aligned}
& =3 \text { in } \times 10 \mathrm{in}^{2} \\
& =30 \mathrm{in}^{3}
\end{aligned}
$$

$$
\begin{aligned}
\text { Total volume } & =30 \mathrm{in}^{3}+120 \mathrm{in}^{3} \\
& =150 \mathrm{in}^{3}
\end{aligned}
$$

Application Problem: A planting box pictured below is made of two sizes of rectangular prisms. One type of prism measures 2 inches by 5 inches by 12 inches. The other type measures 12 inches by 4 inches by 10 inches. What is the total volume of three such boxes?

## Prism B

Length - 6 inches
Width - 5 inches
Height - 4 inches Volume $=(6$ in $\times 5$ in $) \times 4$ in

$$
=30 \text { in }^{2} \times 4 \text { in }
$$

$$
\begin{aligned}
& =120 \mathrm{in}^{3} \\
& =
\end{aligned}
$$

$$
\begin{array}{r}
240 \text { in }^{3} \\
+480 \text { n }^{3} \\
\hline
\end{array}
$$

## The total volume of the planting box is

 720 cubic inches.
